

# Easy, reliable and lightning-fast document composition & workflow at your fingertips

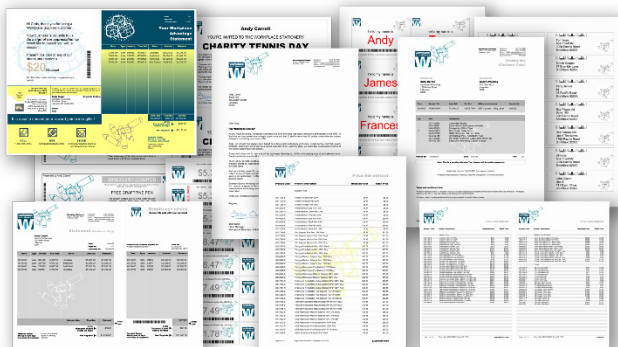

**Paris Enterprise** is the flagship production-strength document composition and distribution solution from XLPrint - used by thousands of customers across more than 55 countries, producing billions of pages a year on production and distributed devices and electronically. Paris Enterprise is robust and fast, designed from the ground up for high-speed, high-volume, high-reliability document production and distribution around the clock. Paris Enterprise drives monochrome, highlight color and full color print devices at optimum speed for all transaction and variable data printing applications. Paris Enterprise allows you to completely automate and manage your document work-flows, including both print output and multi-channel delivery.

## Designing and Delivering Transaction Communications:

The Paris document composition and workflow solution, by XLPrint, continues a history of innovation and leadership in the world of document composition and workflow solutions for transaction communications. It is a powerful, simple to use middle-ware solution sitting between your enterprise application and your preferred delivery channel, be that print, or digital.

## What are Transaction Communications?

Transaction communications are data-driven documents produced and required by business processes to facilitate and communicate a transaction.

Common examples are invoices, statements, letters and forms however they can also include process-oriented documents like labels, delivery-notes, checks, prescriptions and more.

## Who Needs Paris?

Whether you need to redesign your statements, print prescriptions on plain paper, email insurance policies, or develop a bespoke document workflow, Paris will meet all your transaction communication needs today and in the future.

Paris is an open-architecture system that allows companies to produce and maintain any type of data-driven transaction communication.

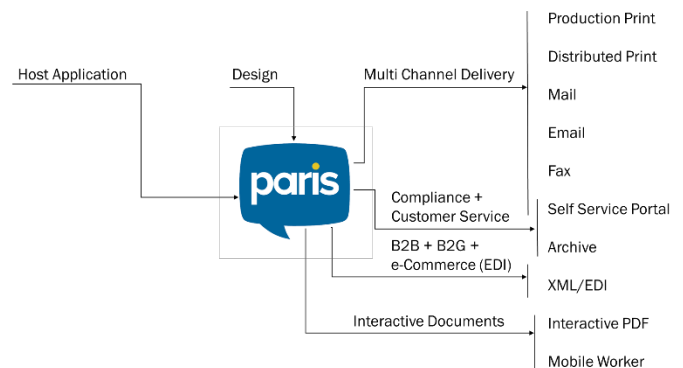

Trusted by Fortune 1000 customers, healthcare organizations, governments and education institutions in more than 50 countries around the world, Paris is here to make your life a whole lot easier!

## How Does Paris Integrate Into Your Business?

Enterprise applications and business systems are notoriously complex and difficult to change.

Paris sits between these and your desired delivery channels to take the burden of document composition and workflow off these applications.

Paris allows you to easily create and modify your transaction communication documents and then ensures high-speed composition and delivery of these documents to any channel, be it digital or print.

## Design:

A truly "What you see is what you get" (WYSIWYG) editor allows you to graphically lay out and manipulate both data and form elements at the same time for quick and accurate development and maintenance of print applications. Page through sample data files for real-time proofing with a 100% accurate representation of the ultimate output.

Design once for any destination. The Paris Designer allows you to design print applications independently of the device making it easy to distribute the resulting documents to any distributed or production class device as well as to digital.

**Output:**

Paris will print to any device at optimum speed - including PostScript, HP-PCL, VPS, PDF and GDI. Unlike many tools on the market, Paris is designed to print transaction applications anywhere, from low speed, distributed printers, through to high-speed production equipment.

Automatically deliver perfect electronic PDF or TIFF copies via email or to your document management system including meta-data for EDI and indexing for filing.

**e-Delivery:**

Generated by the same Engine that produces the print-ready output, electronic output from Paris is guaranteed to be an exact copy. Output as searchable PDF or as a TIFF image then have Paris automatically deliver these documents via email, pushed to your self-service portal, or uploaded to your Document Management System.

Extract the document's meta-data during composition to add value such as index information, address information, or transactional data. Use the extracted meta-data to power new workflows or EDI data interface processes.

**Automation:**

Paris workflow definitions allow you to define any number of automated workflows. Trigger input events from watched-folders, TCP-IP LPD and more. Output to any physical printer including PostScript, HP-PCL, Windows GDI and more. Deliver electronic copies via email or to your Document

Trigger scheduled actions based on the day and time or on the presence of certain documents. Apply document actions such as mail optimization, merges, sorts and filters. Apply custom processing using scripts to manipulate the input data. Apply composition rules according to events in the data. Manage print jobs and devices from anywhere.

**Manage:**

The Paris Spooler's operator interface can be accessed securely from anywhere via a web browser for monitoring and maintenance of the Paris document workflows and output devices. Configure user profiles and access levels to enable view-only, job and printer control or full administrator level

The Paris printer-independent philosophy ensures that operators can move print jobs from one device to another without concern. Operators can remotely pause, restart, move and delete jobs through a simple, responsive user interface available through any browser with no need to install software.

**Transform:**

The Paris Converter module allows you to convert legacy LCDS resources such as Forms, Fonts, Images and Logos as well as Job Definitions. Resources are converted into generic Paris resources meaning that they can be maintained and enhanced in Paris.

Paris can consume your legacy LCDS print streams meaning that there is no need to change your existing processes. Embedded DJDEs are interpreted on the fly and output to any device for a true printer independent solution to your LCDS migration.

**Paris Enterprise Modules:**

Paris Enterprise is a suite of connected modules that combine to provide a true end-to-end document production system.

The **Paris Enterprise Designer** is where you create and modify your electronic Forms and Environments in a truly "what you see is what you get" (WYSIWYG) experience. See and manipulate real data and forms at the same time with precision. See the result of changes immediately, no need for code and no need to recompile code. Import existing PDF Forms or copy/paste text from Microsoft Word® and other documents for quick development of new applications.

The **Paris Enterprise Spooler** is the Workflow "hub" of your document production system. The Paris Enterprise Spooler may be run as a fully automated and secure Windows Service or as an application. Configure the Paris Enterprise Spooler and manage printers and jobs remotely through the secure web console. The Paris Enterprise Spooler allows you to manage many different input sources and destinations at once, giving you complete control over your entire document work-flow. Connect to your host via TCP-IP LPD or "hot folders". Configure any number of input sources and define their total work-flow including their formatting rules and destinations. Define any number of destinations for a truly distributed solution including optional email, fax and archive.

Use **Paris Define** and **Paris ReDefine** to work with CSV and XML data files.

The Barcode function allows you to calculate and print any linear and 2D barcode including the QR barcode.

Use the Resource Manager to distribute and backup your Paris Enterprise applications and resources for instant version control.

Use the optional **Paris Enterprise Electronic Document Output (EDO)** module to email, fax and archive perfect electronic copies, as PDF or TIFF, automatically from Paris Enterprise.

Migrate legacy LCDS applications and resources using the **Paris Enterprise Converter** tool. Edit and add value to these legacy applications with color, unlimited fonts, graphics, charts and much more.

The Paris Enterprise suite of modules employ technology that is robust, proven, optimized and efficient. It is used by thousands of customers over 55 countries producing billions of paper and electronic documents each year.

**Features at a glance:**

WYSIWYG Designer (Data and Form).
Spooler Runs as a Service.
Remote (web) access to manage and administer.
Dynamic Column Formatting.
Runtime Events (DJDEs).
Dynamic Transactional Color (Highlight and Full).
Barcodes including QR.
Data-driven Charts.
Page Overflow logic.
Relative Positioning (floating and resizing objects).
Form-Change Events.
Tray-Change Events.
Page Definition-Change Events.
Lookup Tables.
Field Calculations.
Data and Text Formatting.
Page Events.
Dynamic Data-Driven Graphics.
Uses Windows Graphics and Fonts.
Copy-Sensitive Processing.
Intelligent Duplexing.
Device-Specific Features.
Intelligent Back-Forms.
Data-Driven Emailing.
Data-Driven Faxing.
Data-Driven Generic Archive (PDF or TIFF).
Data-Driven DocuShare Archiving.
Large Fonts for Signs and Banners.
Variable Paper Sizes.
OMR Printing.
