Units which cannot be shipped fully assembled must be evaluated and labeled at the final installation location. Cord & Plug units or units in which their only electrical connections are the mains power (facility hookup) may be evaluated at locations other than the final installation site. However please note that final acceptance is dependent on the AHJ or Inspector, some local jurisdictions require only evaluations at the final installation location regardless of the product type. NFPA guidelines mandate that all field evaluation bodies are to perform final labeling at the final installation location unless exempt otherwise; installation address is required for all products under the field labeling program.
